HITACHI CONGRATULATES VOXSON

Hitachi would like to congratulate Australian owned Voxson on joining the race to develop mobile phone technology meeting a single world-wide standard. The company has just received Full Type Approval (FTA) for a mobile telephone using 2nd generation, dual-band GSM with WAP Browser Version 4.1 compliant with 1.1 WAP Technology from one of the world's leading independent testing bodies. With the Voxson GSM handset you can send e-mails from Finland to Silicon Valley, or call Paris to London. Voxson is the only company in Australia, and one of the few in the world that has designed and developed Dual Band GSM handsets (GSM Technology), including having source code for the technology in-house. Thanks to a long-term strategic partnership with the Hitachi Semiconductor Group, Voxson will be providing competitive mobile phones to the global market place. By bringing more resources, technology, R&D and engineering to the race, odds are Hitachi Solutions can help you too. Hitachi invites other interested parties to contact us or visit www.hitachi.com.au
